1. Common Issues

Common issues are problems that occur on a regular basis — they are the most likely scenarios to be encountered during day-to-day monitoring.

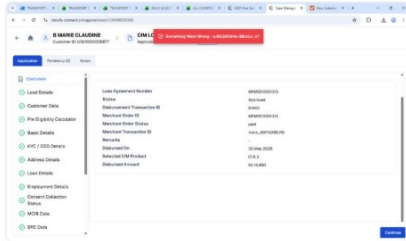

1.1 Load Time

Some pages or elements may not have loaded correctly, or may be taking an unusually long time to load. The recommended first step is to refresh the page, or perform a hard refresh, to determine whether the issue resolves itself.

Hard Refresh shortcut: **CTRL + R...**

Bibi Saheen Islam 11:03

BI HI- Good morning, unable to proceed further to push agreement to Activation Application CIM000009565 Agreement MXM201000313 - refer to screenshot

kindly advise pending on loan booking details

Sudheer Prabhu 11:05

Checking

Sudheer Prabhu 11:22

Can u plz refresh and check

1.2 Too Much Cache

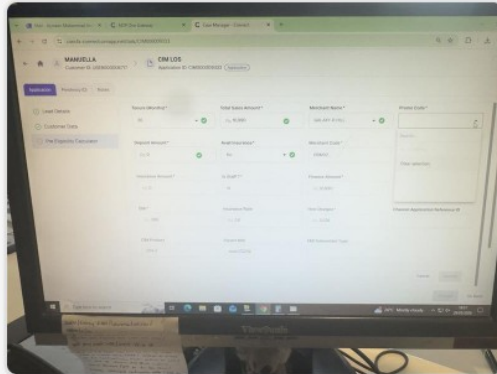

When there is too much accumulated cache, the system may become unresponsive or block certain processes. This is typically indicated by missing data in dropdown menus.

- Data missing in dropdown menus is a key sign that cache needs to be cleared.

Dear team

Krishna Poligadu Yesterday 16:59

KP

Aymaan Muhammad Irbaad Ramsamy 29/05/2026 16:58

Dear team

clear browser cache and try again

1.3 Print Issue

Print-related issues require gathering information from the user before taking further action. Begin by asking the following:

Ask the user: "Were you able to print previously?"

Based on the user's response, proceed as follows:

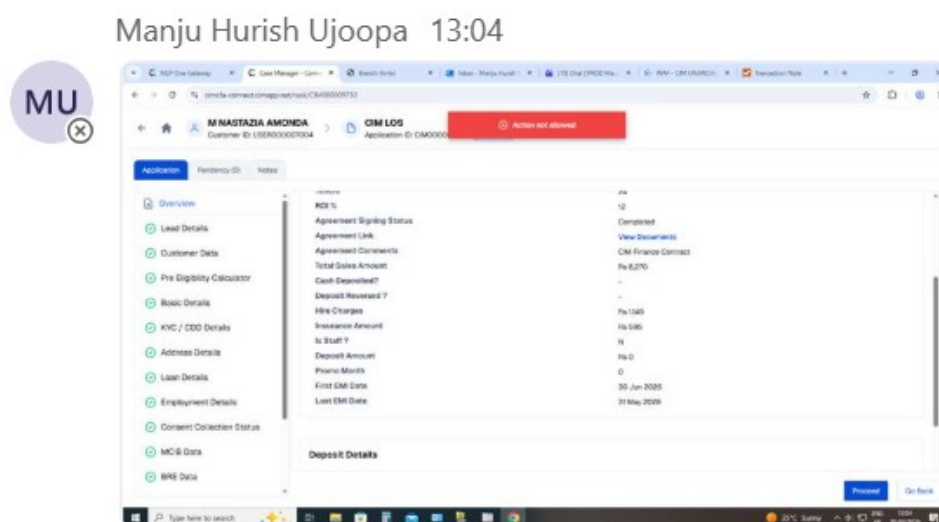

- If YES — Contact any available admin worker to assist.
- If NO — Proceed to contact M2P for support.

1.4 Unable to Proceed

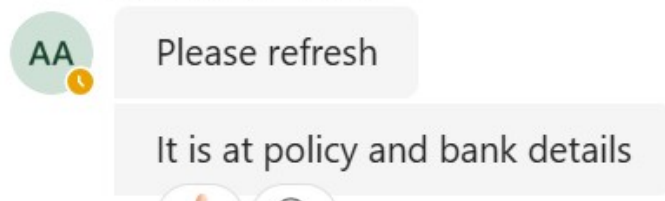

There are several reasons why a user may be unable to proceed within Finflux. The following subsections cover each scenario.

1.4.1 Browser Requires a Refresh

Finflux may occasionally require the browser to be refreshed before allowing the user to continue. The screenshot below shows an example of this situation:

Azna Atchia 13:04

1.4.2 User Did Not Use the Tab Key

In some cases, the user may not have navigated between fields using the Tab key, which is required for Finflux to register the input correctly. This can prevent the process from proceeding. The screenshots below illustrate this scenario:

You need to first assign to you using option Assign to Me only then you will be able to proceed

2. Important Issues

Important issues are those that require direct and prompt assistance in order to prevent clients from waiting too long for a resolution.

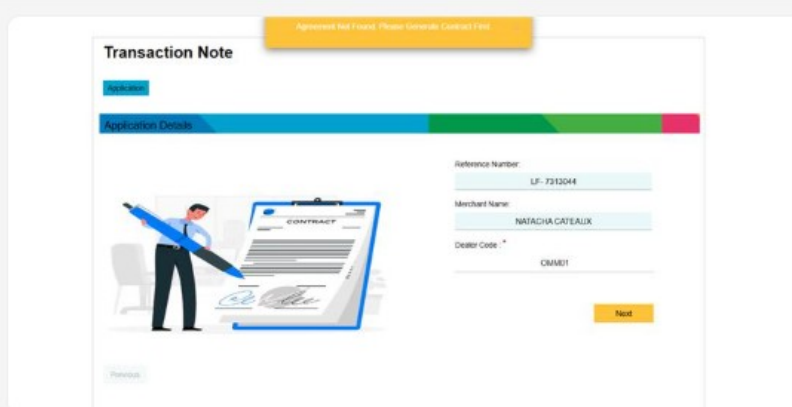

2.1 Laserfiche-Related Issues

Note: These issues may require the assistance of Abhishek.

Certain Laserfiche-related issues cannot be resolved independently and will need Abhishek to step in and provide support. The screenshots below show examples of these issues:

Natacha Cateaux 12:08

NC

APPL CIM000009637 / CANNOT GENERATE TN

Deposit at merchant but dealer code OMM01 does not exist

Abhishek Beesony 12:18

AB

Natacha Cateaux 30/05/2026 12:08

📄 APPL CIM000009637 / CANNOT GENERATE TN

use dealer code provided by [Gitanjali Mungrah](#)

2.2 Process Incorrectly Completed

Note: These issues may require the assistance of Git or Azna.

Some issues arise when a user has missed required information or has left mandatory fields unfilled. These errors can cause the process to fail at a later stage. The screenshot below provides an example:

Nazia Mooratsing 13:29

Application ID: C1M000009705

DTI (%)	30.83
MCIB DTI (%)	0
Active Installment	Rs 4,932
Active Facility EMI	Rs 2,718
Exposure Amount	Rs 112,906
MCIB Exposure Amount	Rs 0
Is Staff ?	No
Finance Under Process	0

Gitanjali Mungrah 13:29

Gueshna Ramasawmy 30/05/2026 13:28
it is now telling incomplete documents when all docs have already been submitted

you need to add more documents
select ID recto
re upload your ID recto

2.3 Azna Documentation Not Correctly Followed

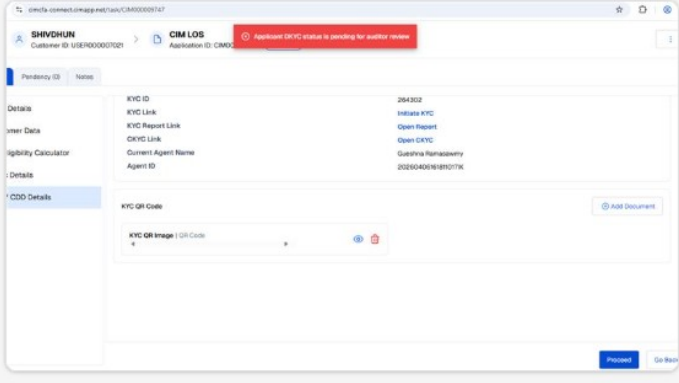

Note: These issues may require the assistance of Git or Azna.

Users may be unfamiliar with specific steps outlined in the Azna documentation, such as the DKYC step action. The screenshot below illustrates an example of this type of issue:

Gueshna Ramasawmy 13:13

GR

hello. Kindly advise how to proceed

Azna Atchia 13:14

AA

Gueshna Ramasawmy 30/05/2026 13:13
hello. Kindly advise how to proceed

Hi Gueshna, new client, please click on the eye icon

Scan the QR code on your tablet

Edited

it will lead you to DKYC portal

These are issues that require immediate involvement from the M2P team and should be escalated as soon as they are identified.

API-related issues require M2P to be contacted immediately. This should be done by reaching out to them via the Hyper Care group. The screenshot below shows an example of what this type of issue looks like:

HI- Good morning, unable to proceed further to push agreement to Activation Application
CIM000009565 Agreement MXM201000313 - refer to screenshot

4. Ticket-Level Issues

Ticket-level issues require a more in-depth investigation by the M2P team. These may take longer to resolve and must be properly logged with the appropriate ticketing system.

4.1 Most LMS-Related Issues

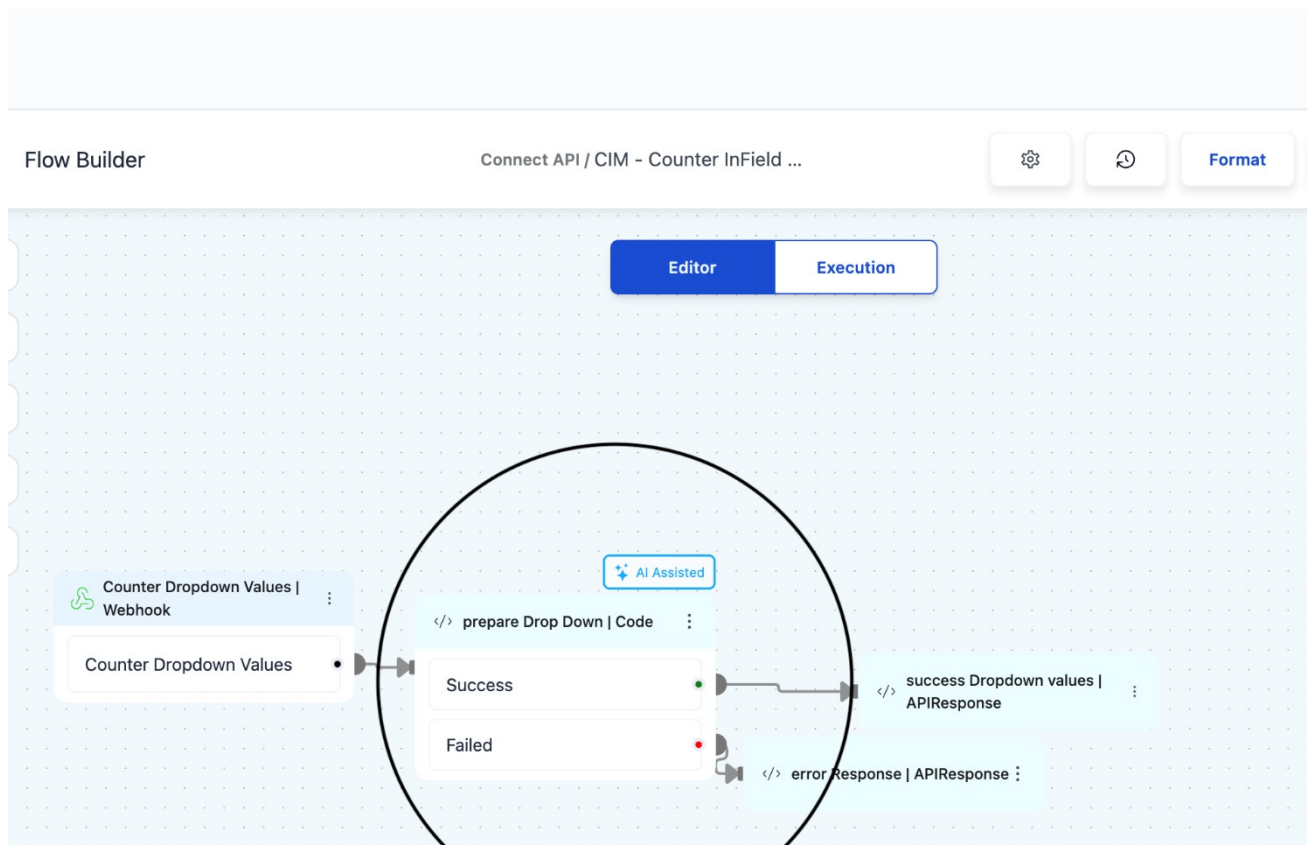

Action Required: Raise a Bold Desk ticket for this type of issue.

4.2 Deep System Issues

Action Required: Raise a Jira ticket for this type of issue.

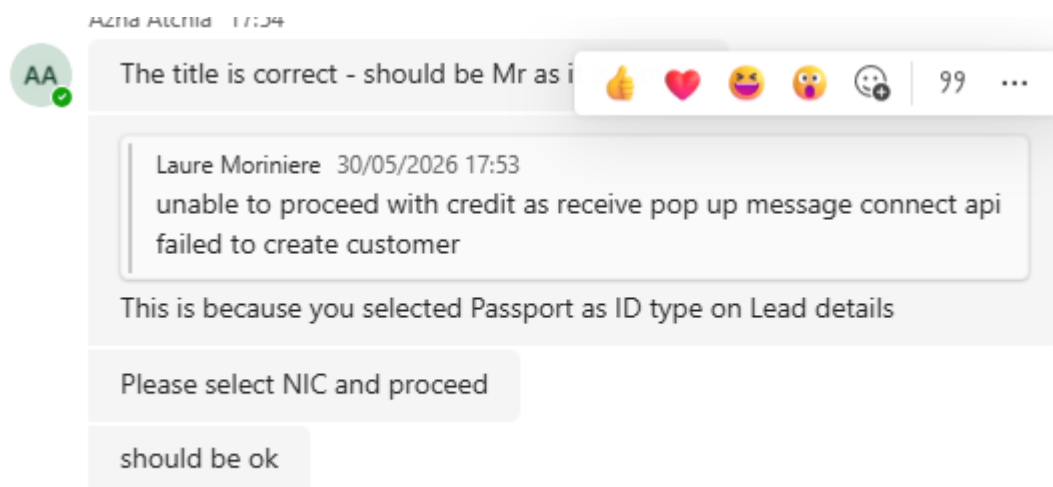

4.3 Creating a Counter Code on LOS

To create a counter code on LOS, it must be configured within the correct workflow. The screenshot below illustrates where this configuration takes place:

4.4 API Issue After the Credit Step

This issue occurs when a user has entered their Passport number into the NID (National Identity Document) field instead of the correct field. The screenshot below shows an example of this error:

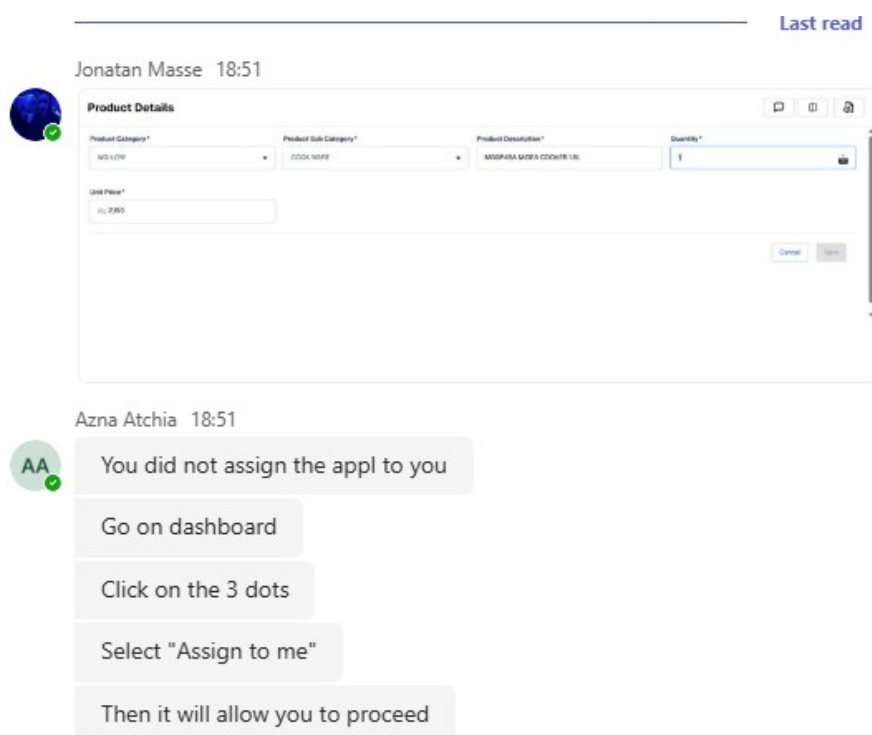

5. User Issues

User issues are problems caused by incorrect actions or missed steps on the part of the user. In most cases, these can be resolved by guiding the user through the correct process.

5.1 Task Not Assigned to User

Some issues arise because the user has not assigned the task to themselves. The screenshot below demonstrates the correct process for self-assigning a task:

5.2 Missing Merchant Code

Instruction: Instruct the user to enter the Merchant Code before entering the Merchant Name.

Yolette Lejeune 18:53

UNABLE TO GO FORWARD WITH APPL
BLOCK ON PROMO CODE

Azna Atchia 18:54

AA Can you clear selection in the merchant name dropdown
Then reselect 361

18:54
if issue persists, clear cache and try again

Azna Atchia 18:54

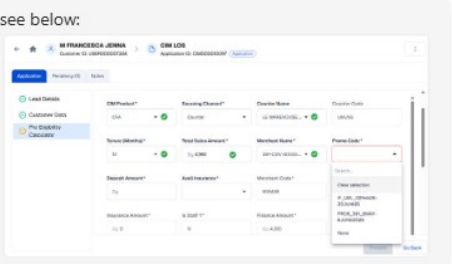

AA Then you press tab, then select promo
None will appear

5.3 Promo Code Issue

The promo code must be validated and properly selected before the user moves on to any other fields. Failure to do so will prevent the process from proceeding correctly.

Azna Atchia 18:59

AA The issue is that you validated other fields after promo code, like deposit field and insurance before validating the promo one
see below:

its appearing for me

Type a message

5.4 Unable to Find Agreement on LOS

For the agreement to be accessible on LOS at a later stage, the entire process must have been completed up to and including the Disbursement Details level. The screenshot below shows the relevant step:

Azna Atchia 09:49

AA

Give me the NIC

Checked it, it is at Final Agreement Details:

Application ID & Name	Customer Name	Assigned To	Created At	Updated At	Current Activity	Status	Actions
CIM000005198 CRM LOS	MARIE JESSICA	samolsy.marlene	Apr 14, 2025	May 28, 2025	Final Agreement Det.	Initiated	

This is why not showing on Cashiering or LMS

Edited

You need to proceed till Disbursement details screen so that the application will be pushed to LMS and cashiering

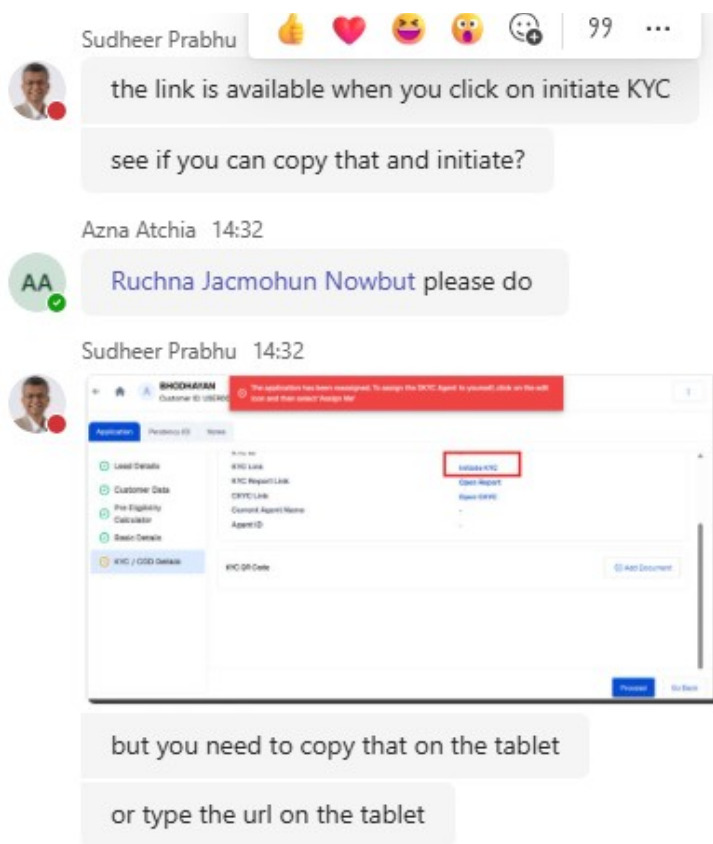

Everyone,

A gentle reminder: As per the agreed operational process, an agreement is considered processed once it has been successfully moved to the **"Disbursement Details"** stage.

Please ensure that this is completed for every agreement without exception.

5.5 KYC Not Appearing

For the KYC (Know Your Customer) section to appear correctly, the link must be either copied or manually typed on the tablet. The screenshot below demonstrates this step:

Additionally, for new clients where the QR code is not appearing for KYC, the same approach should be applied.

5.6 KYC Still Not Appearing After Initial Fix

If the previous solution did not resolve the KYC display issue, the user should navigate back one step in the process and then proceed forward again. This typically causes the KYC section to reappear. The screenshot below illustrates this:

The screenshot displays a chat interface with a header bar containing a thumbs up icon, a heart icon, a smiley face icon, a surprised face icon, a sad face icon, and a speech bubble icon. The chat history shows a message from Naga Sai Manikanta Dodda at 14:39, marked as 'Edited', with a status icon 'ND' and a green checkmark. The message content is: 'Krishna Poligadu 03/06/2026 14:38 what do you mean removed?'. Below this, a text input field contains 'they clicked on Remove Button'. A screenshot of a KYC form is shown, featuring a table with the following data:

KYC ID	KYC Link	KYC Report Link	CKYC Link	Current Agent Name	Agent ID

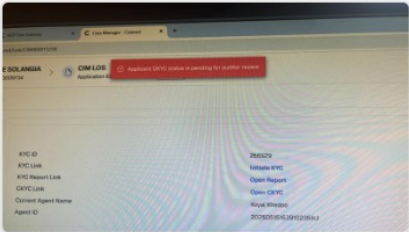

Below the table, there is a 'KYC QR Code' field and an 'Add Document' button. A red circle highlights the 'Add Document' button. The chat continues with a message from Sudheer Prabhu at 14:41 asking 'does it re appear if we go back'. Naga Sai Manikanta Dodda responds at 14:42, marked as 'Edited', with a status icon 'ND' and a green checkmark, saying 'yes Sir It will appear'.

5.7 New Client KYC via QR Code

For new clients, the KYC process must be completed by scanning the QR code using a tablet. The screenshot below shows what this looks like in practice:

Koyal Khedoo 14:15

Dear team please note unable to proceed keep showing this pop up for new client has refresh more than 3 times still same

14:18

You need to click on the eye icon, scan the QR code and do the DKYC

Azna Atchia 14:19

Hi Koyal, it is a new client

then you need to proceed with the kyc portal

as said by Krishna

Loan API Failure for CIM

Issue	Loan API Failure for CIM
Date	08 July 2026
Ref Application	CIM000020764
Observed Symptom	Unexpected popup appearing on application CIM000020764

5.8 Summary

The permissions required to run the LMSBRE Report were missing for the Connect user in LOS. This caused a Loan API failure for the CIM application, resulting in an unexpected popup being displayed to the affected users.

Supporting Screenshots

The screenshot displays the 'KYC Report' interface. At the top, there is a header with a back arrow, the title '< KYC Report', and a status indicator 'Status: ● Approved'. Below this is a table with the following columns: Today's Date, Customer Type, KYC Template, NIC ID, DKYC ID, KYC Initiation Timestamp, KYC Submission Timestamp, and Mobile Number. The table contains one row of data: 7/8/2026, New, NEW, S2701040020614, 2614506, 08-07-2026 10:25:55, 08-07-2026 10:33:53, and 10000230.

Below the table, there is a navigation bar with a back arrow, a home icon, a user profile icon labeled 'LUCA' with 'Customer ID: USER000015375', and a red error message box that says 'Something Went Wrong. Please Contact Support'. To the right of the error message is a three-dot menu icon.

The main content area is divided into two sections. The left section is a sidebar with a list of navigation options: Lead Details, Customer Data, Pre Eligibility Calculator, Basic Details, Guarantor Details, KYC / CDD Details (highlighted with a yellow circle), Address Details, Loan Details, Employment Details, Consent Collection, and Status. The right section is titled 'KYC / CDD Details' and contains a form with the following fields: KYC ID (2614506), KYC Link (Initiate KYC), KYC Report Link (Open Report), CKYC Link (Open CKYC), Current Agent Name (Azna Atchia), and Agent ID (616728). There are also icons for a comment, a print, and a refresh. At the bottom of the form, there is a 'KYC QR Code' field, an 'Add Document' button, and 'Proceed' and 'Go Back' buttons.

Resolution

The M2P team identified the missing permissions and provided the required access to the Super User. This enabled the successful execution of the LMSBRE Report (Read Report permission). The issue has been fully resolved.

Root Cause

The M2P team performed a production deployment for LMS on 7 July 2026. During this deployment, the following sequence of events led to the issue:

- A global-level Create permission was already available prior to the deployment.
- A Read permission had recently been added to the code for the Super User.
- During checklist preparation, focus was maintained on the UAT-to-Production migration process.
- As a result, the migration instance permission update task was inadvertently not performed, leaving the Read permission missing for the Connect user in LOS.

Preventive Action

To prevent a recurrence of this issue, the following measures have been agreed upon:

- Going forward, the release checklist will be prepared and validated for both UAT and Production migration activities before any deployment to Production.
- A dedicated permission verification task will be included as a mandatory step in the release process, to ensure that all required permissions are properly migrated and validated on the delivery date.
